

# ABSTRACT OF THE DISCLOSURE

A recyclable, one-time use, print on demand, digital camera comprises a chassis. The chassis carries an image sensor device for sensing an image, a processor for processing the sensed image, a pagewidth print head for printing the sensed image,  
5 an ink supply arrangement for supplying ink to the print head and a supply of print media onto which the sensed image is printed. A casing surrounds the chassis so that the supply of print media is unable to be accessed without destruction of the casing.
